

# Creating a news Website

1. Download [File](#) extract and open in VS code
2. In index.html write Header part with 5 buttons (Do not write anything else!)
3. There are only one single div with id="mainNews" and you have to add elements into that div using javascript
4. Do not change css file!
5. In functions.js file you are given an array of objects and do not change that!
6. You need to create a function named `generateHtmlElement(dataList)`, which takes `dataList` (Array of Objects) as parameter and generates necessary html elements and put them into the div with id="mainNews".
  - a. You have to catch all 5 buttons and listen with `addEventListener("click", func)`,
    - i. `Sort Up` button function have to do sorting in ascending order and call `generateHtmlElement(sortedArr)` function
    - ii. `Sort Down` button function have to do sorting in descending order and call `generateHtmlElement(sortedArr)` function
    - iii. `Бүх мэдээ` button function have to just call `generateHtmlElement(news)`
    - iv. `Улс төр` button function have to do filter all objects that has type: "улс төр" and call `generateHtmlElement(filterdArr)`
    - v. `Спорт` button function have to do filter all objects that has type: "спорт" and call `generateHtmlElement(filterdArr)`

Note: whenever you click any button you have to delete all the previous elements inside div with id="mainNews".
